

Bendigo Bank EFTPOS powered by Tyro

Mobile EFPTOS – Getting the most from your battery

A new battery achieves full performance after two or three complete charge-discharge cycles. You will need to recharge once to 100% for the battery charge icon to display accurately.

It takes approximately 2.5 hours to fully charge a battery. When fully charged it allows for approximately:

- 300 transactions a day, with one ticket printed per transaction
- 40 transactions a day, over a period of 4 days
- 7 days on stand-by, with either WiFi or GSM/GPRS module in sleep mode

Charging tips

For optimal performance and battery life, we recommend:

- Charging at room temperature
- Charging to full capacity (100% battery power) before taking the machine off charge
- Avoid letting the battery completely discharge by charging frequently throughout the day, when convenient
- Avoid removing the battery from the machine unless you need to

Preserving battery life

Via **Menu > Power Management** you can:

1. Send your machine to sleep sooner when not in use, by selecting: **Standby Timeout**
2. Decrease the screen dim timeout (the time it takes for the screen to turn off when unplugged from the charging device), select: **Screen Dim Timeout**
3. Decrease screen brightness, select: **Screen Brightness**
